

Using "Price Per" Codes

File these instructions in the MACS Software User's Manual

Requirements

Operating System: Any
MACS Version: 5.0 or higher
Module: Order Tracking

Situation

User wants to use a "price per" code when entering orders.

Refer to the User's Manual, Section 6.8.1 pgs 16+ for more detailed information.

Solution

Price Line Item Price (IMF)

Enter the unit price for the item

Line Item Price Per

This is the conversion factor for determining how to apply the price times the quantity.

MACS will use as divisors only these units:

Price Per Code	Entered as (Order Entry)	Printed on PO	
C	123.45 C	123.45/ C	(price/C w/2 decimals)
.C	123.45 .C	1.2345	(each price w/4 decimals)
M	123.45 M	123.45/ M	(price/M w/2 decimals)
.M	123.45 .M	0.12345	(each price w/5 decimals)
EA	123.45 EA	123.45 EA	(each price w/2 decimals)
.E	123.45 .E	123.4500	(each price w/4 decimals)
DZ	123.45 DZ	123.45/DZ	(price/12 w/2 decimals)
GR	123.45 GR	123.45/GR	(price/144 w/2 decimals)
.K	123.45 .K	0.12345	(price per K w/4 decimals)
KM	123.45 KM	123.45/KM	(price per K w/2 decimals)
(Blanks)	123.45	123.45/um	(price each w. 2 decimals)

Two blank spaces in the Price Per field will print whatever characters have been entered in the Unit of Measure field.
